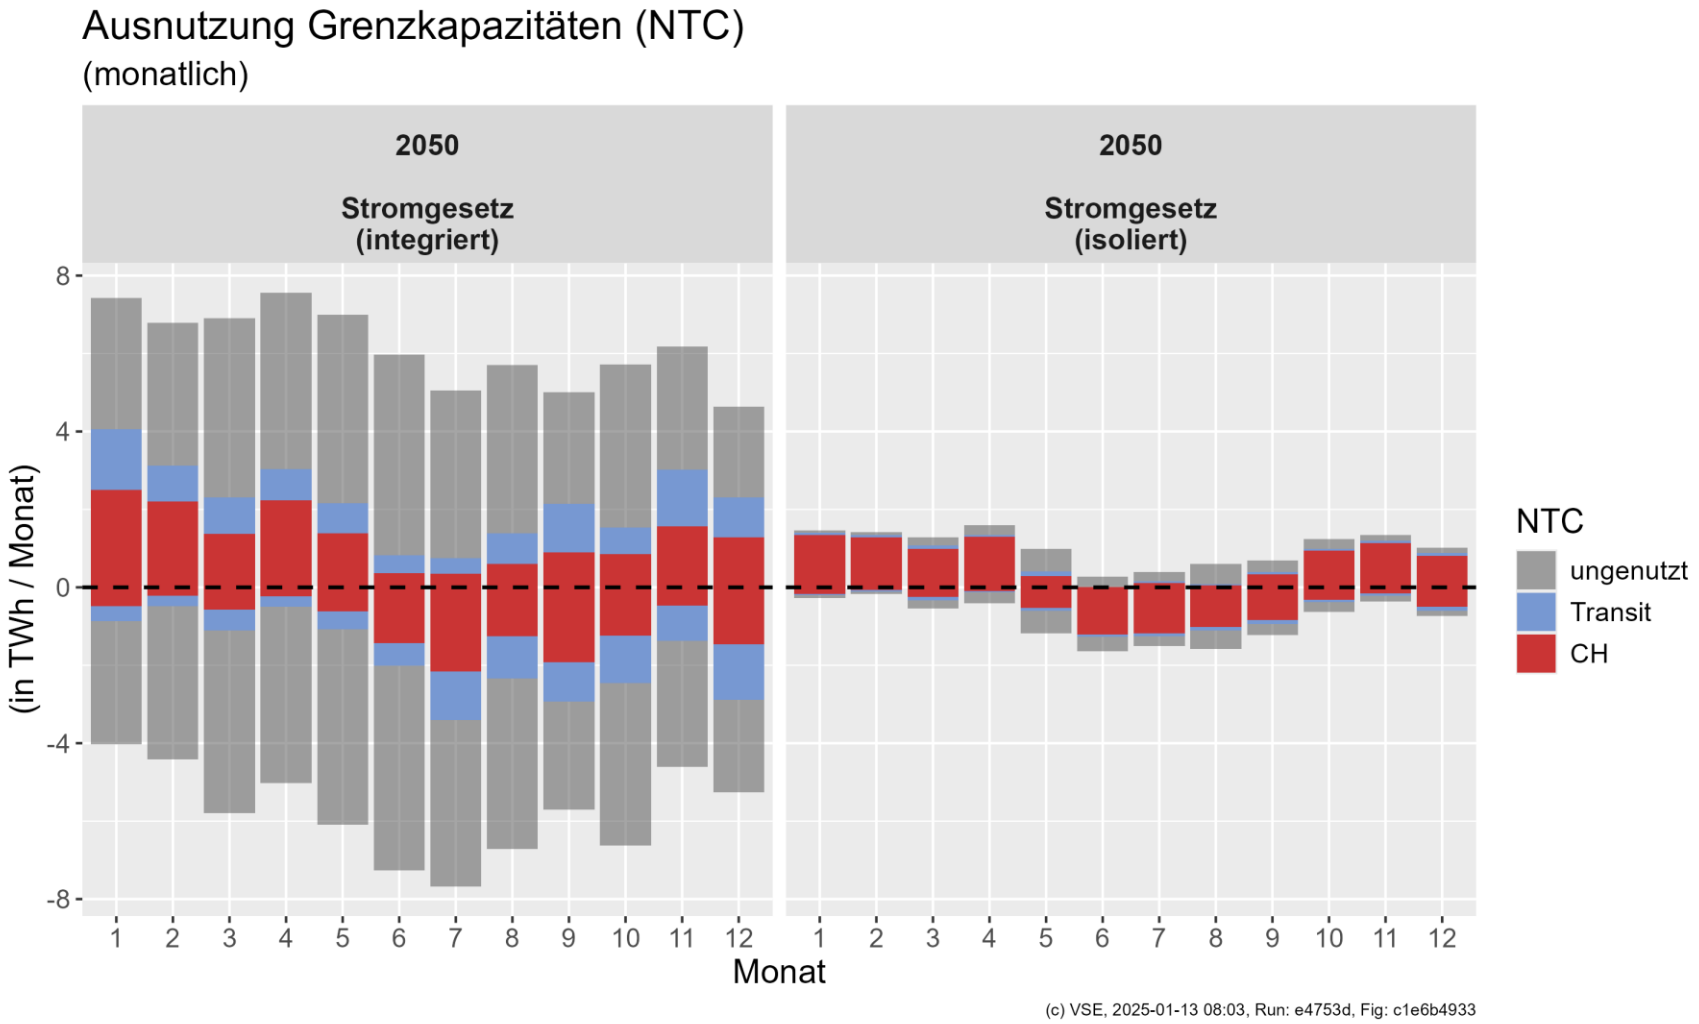
2050 Energiezukunft

Generation, Supply and Transmission of Electricity

November 27, 2025

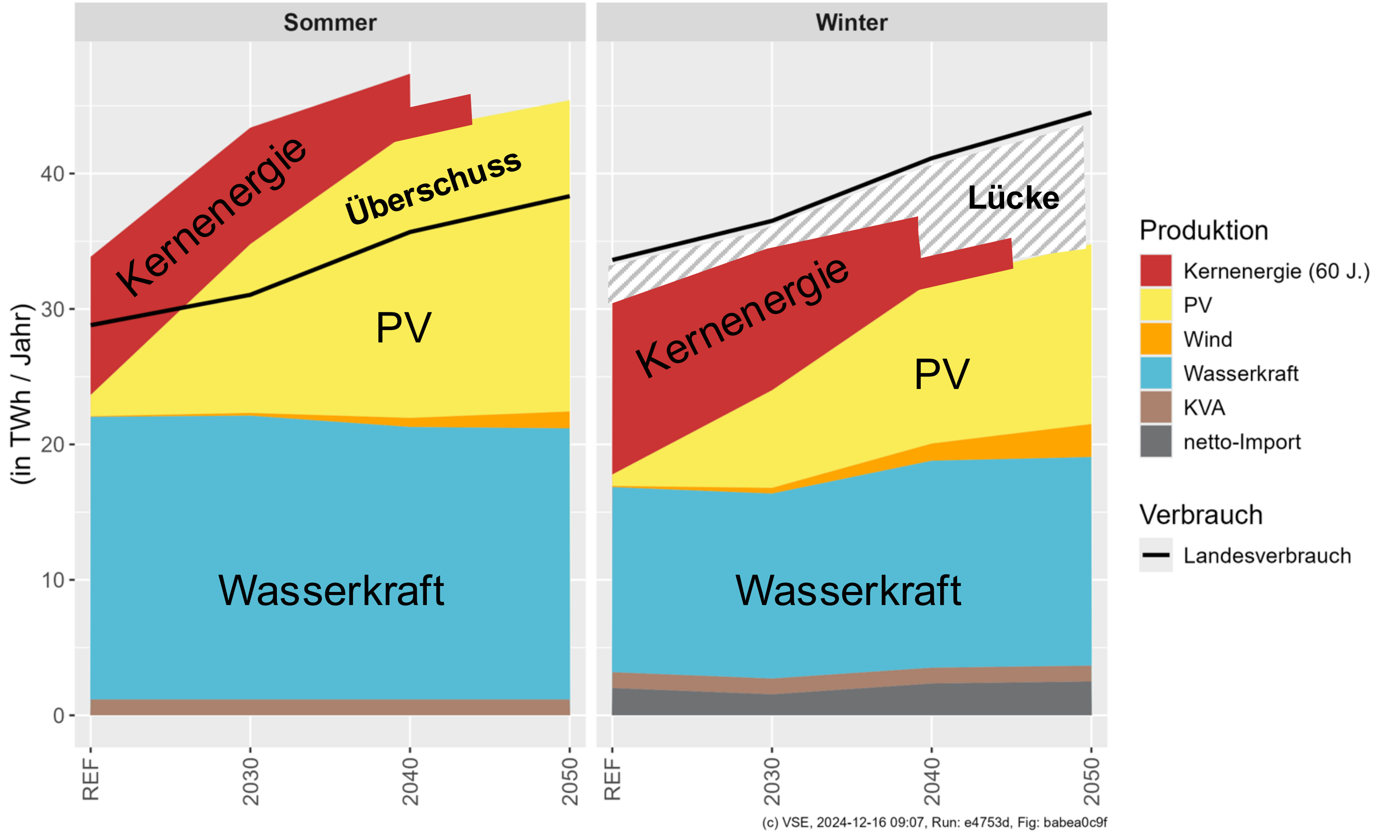
Electricity agreement ensures more cross-border capacity and makes the system more resilient, secure, and stable

2050 Energiezukunft



Future energy system brings challenges in summer and winter

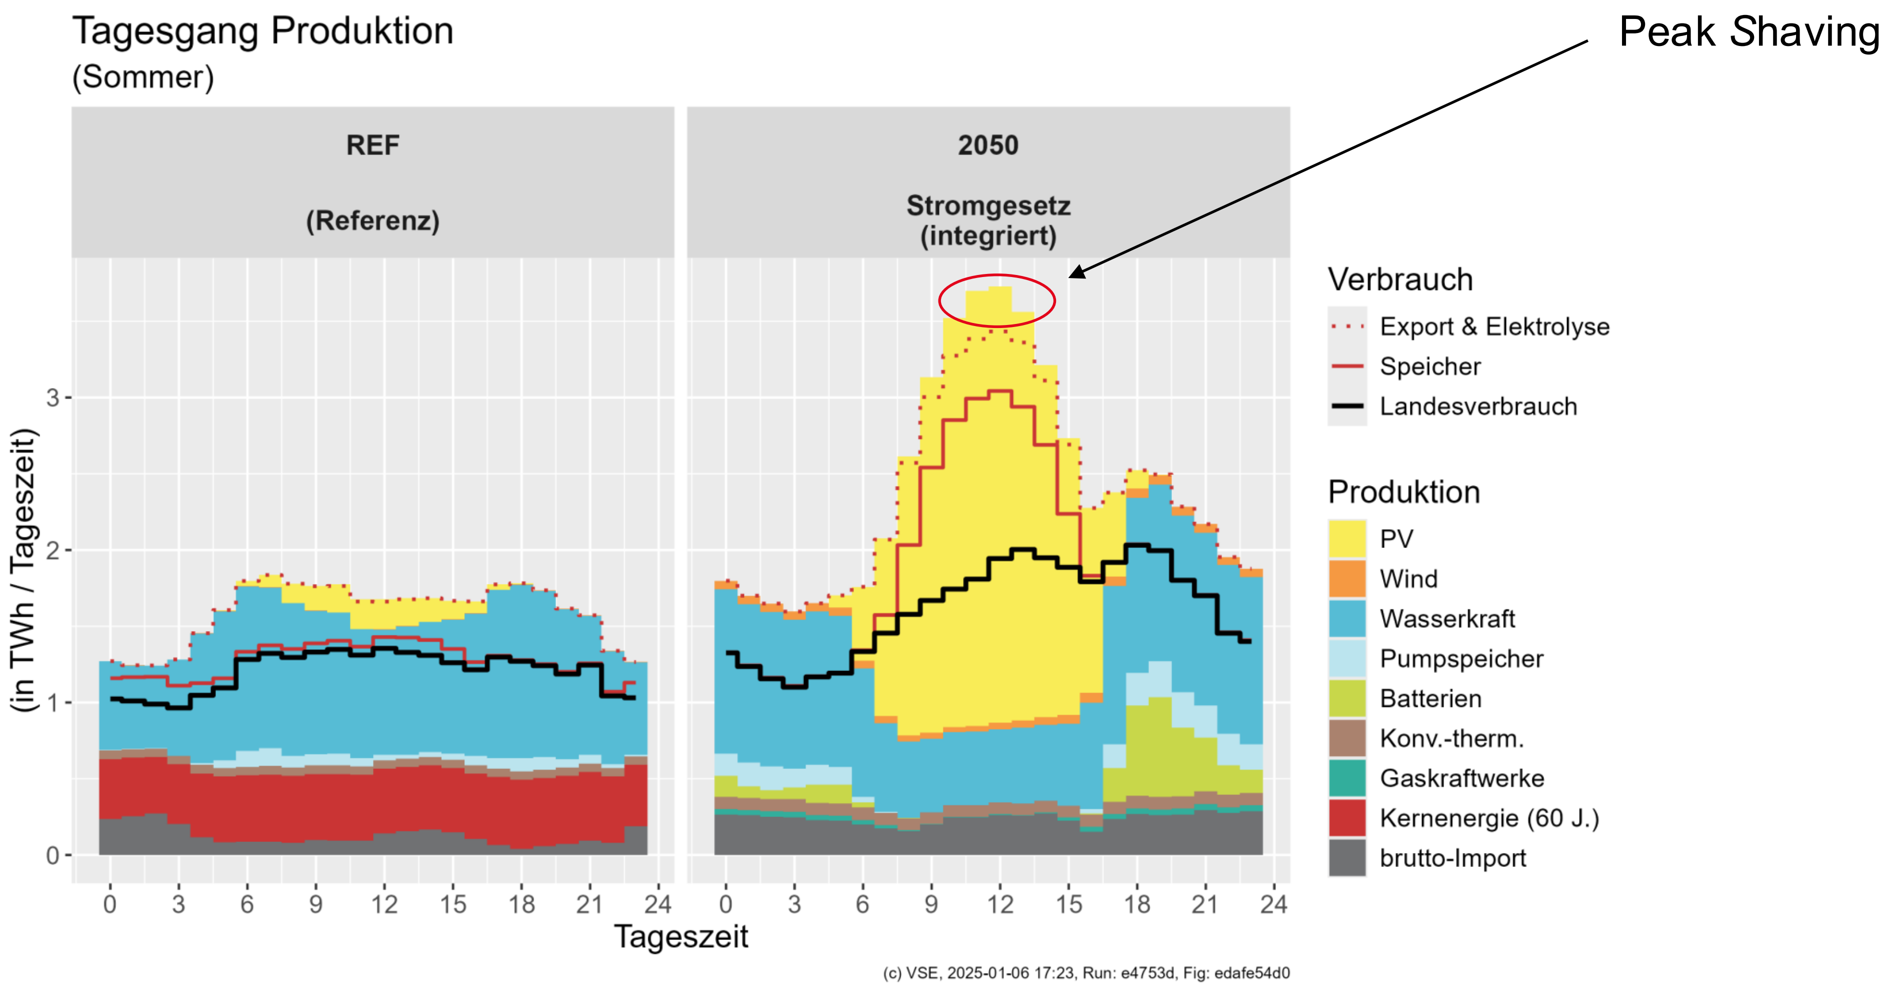
2050
Energiezukunft



Schematische Darstellung Ausbauziele «Stromgesetz»

Focus on solutions to make use of surplus electricity in the summer in a way that benefits the overall system

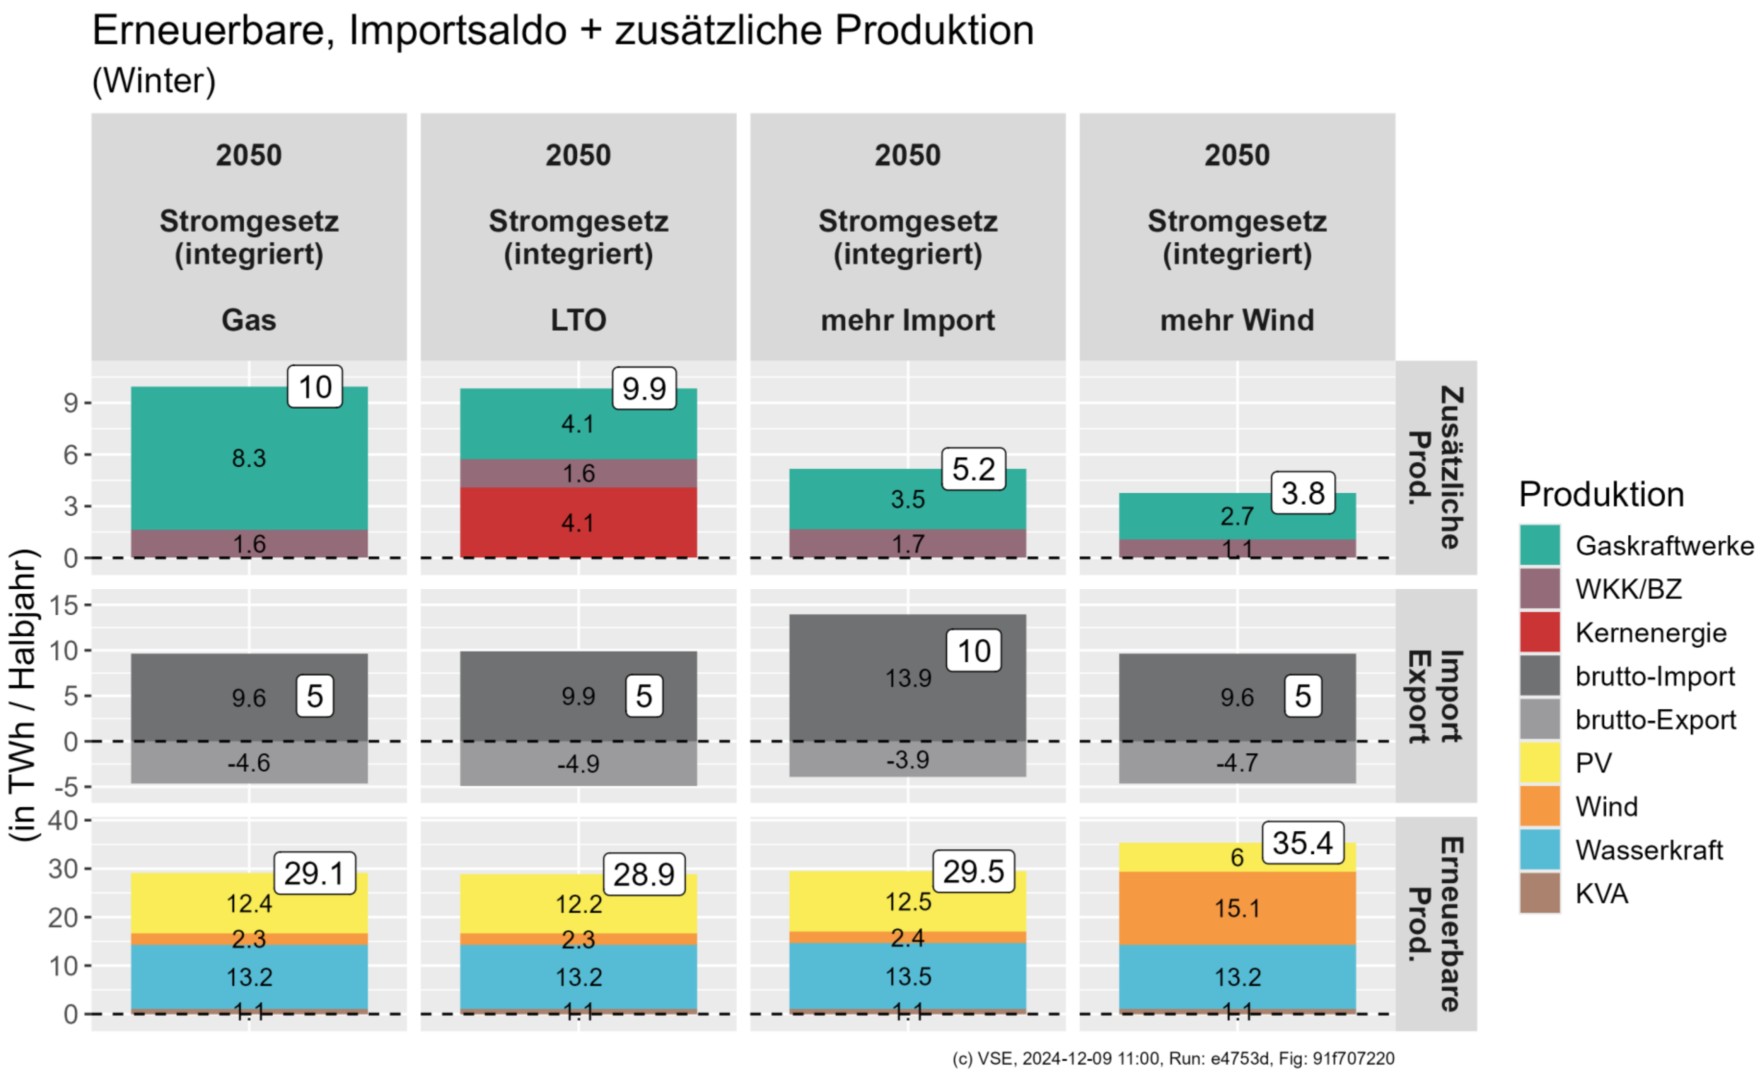
2050 Energiezukunft



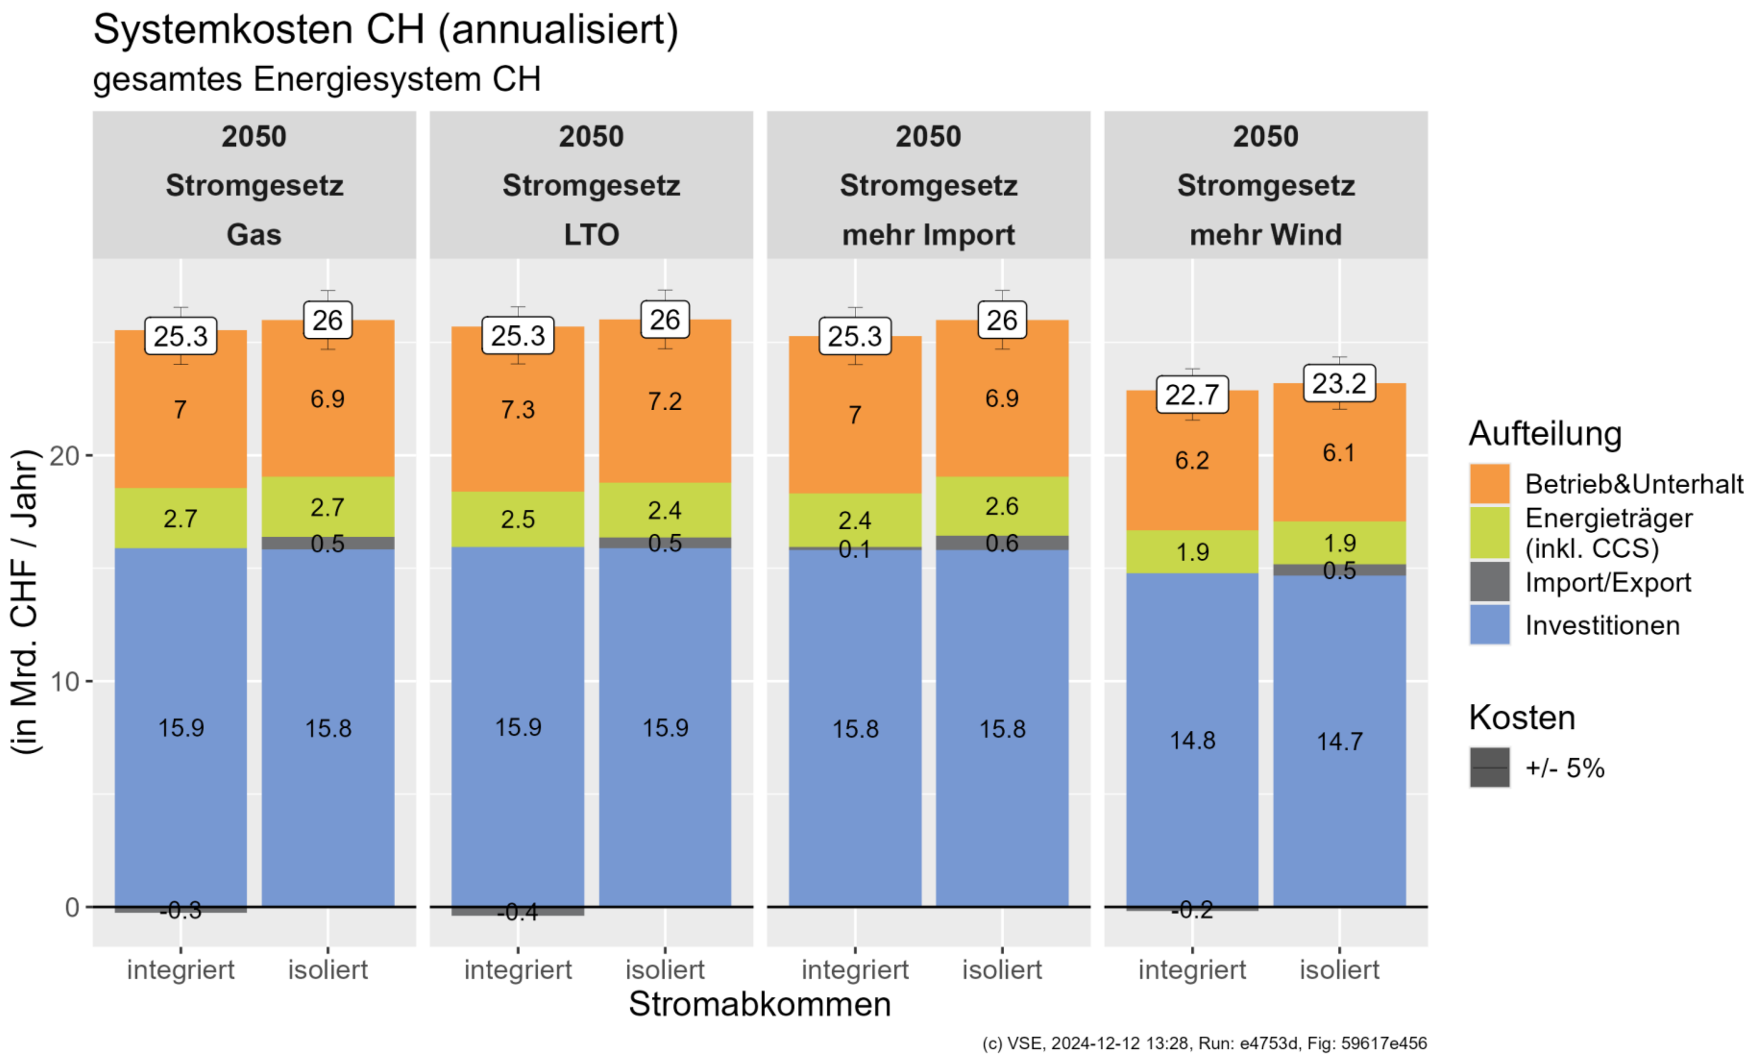
Graphik stellt Aufsummierung (brutto-Verbrauch/-Produktion) des gesamten Halbjahres pro Tageszeit dar.

More wind makes the system more balanced, cost-effective, and reduces the need for controllable winter production

2050 Energiezukunft



Total system costs: With the electricity agreement, the overall system becomes more secure and cheaper in all variants



The future is now – do everything for security of supply and make the energy system fit for new realities

Implementation of the Electricity Act and electricity agreements is a must

Supplementary production for winter is essential – which types, above all, is a matter of political and societal will

Solutions are needed for dealing with surplus electricity in terms of the overall system

Thank you!

Nadine Brauchli, Head of Energy Division and Member of the Executive Board,
VSE (Swiss Association of the Electricity Industry)
